Microsoft Excel 2007 | Microsoft Office

Custom functions, like macros, use the Visual Basic for Applications (VBA) programming language. They differ from macros in two significant ways. First, they use Function procedures instead of Sub procedures. That is, they start with a Function statement instead of a Sub statement and end with End Function instead of End Sub.Second, they perform calculations instead of taking actions.

Create custom functions in Excel - Office Support

Worksheets(1).Range("Criteria").ClearContents Use Cells on a worksheet to obtain a range consisting all single cells on the worksheet. You can access single cells via Item(row, column), where row is the row index and column is the column index.Item can be omitted since the call is forwarded to it by the default member of Range.The following example sets the value of cell A1 to 24 and of cell ...
