Camshaft Problems With Ford V10

Modular V10 (6.8L) - V10 Cam Problems - I have heard that the V10 is not going to be built due to all the problems it has had with the cam. Has anyone else heard of this problem. I am looking at a 2000 Excursion with 57000 miles on it and want to make the right purchase. I am also noticing that the V8's have a higher...

V10 Cam Problems - Ford Truck Enthusiasts Forums

Ford's truck V-10 is an iron-block, overhead-cam aluminum head design that uses centrally mounted spark plugs and direct fire ignition. Almost all valvetrain and accessory components are shared with the 5.4L, making the design fairly stout and easy to repair. However many 1997-2008 engines have a fatal flaw in the cylinder head.

Camshaft Retention Bolt Most V8 Ford engines used a 3/8" bolt to secure the upper cam gear to the cam. Almost all racing engines use a 7/16" bolt for this application. Be sure to check the compatibility of the bolt to the cam, as a 3/8" bolt in a 7/16" cam will almost certainly result in catastrophic engine failure.

Ford Technical Info - COMP Cams

The Ford Triton timing chain is a complex set up featuring two separate chains. Although I've seen the Ford Triton V-8 with 300,000 miles on it, these three valve V-8 engines haven't been exactly trouble-free.

The Ford Modular engine is Ford Motor Company's overhead camshaft (OHC) V8 and V10 gasoline-powered small block engine family. The Modular engine received the name from its design and sharing of certain parts among the engine family, starting with the 4.6L in 1990 for the 1991 model year.

Ford Modular engine - Wikipedia

The camshaft position sensor gathers information about the vehicle's camshaft speed and sends it to the vehicle's engine control module (ECM).The ECM uses this data to determine the timing of the ignition, as well as the timing of the fuel injection that the engine requires. Without this information, the engine would not be able to function properly.

Symptoms of a Bad or Failing Camshaft Position Sensor ...

5.4 Triton Engine Failure of the Fuel Pump Driver Module. This problem is typical for the Ford F-150 with a 5.4 Triton engine. Failure of the fuel pump driver module usually cuts off the petrol feed to the engine which, of course, causes the engine to turn off, thus cutting power to all essential systems.
