fertilization, the goal is to produce approximately 8 to 15 follicles that will give quality eggs at the egg retrieval procedure. We do not want to have overstimulation of the ovaries which can lead to significant discomfort for the woman and in rare cases can result in ovarian hyperstimulation syndrome, OHSS.

Ovarian Stimulation Protocols for IVF

When a woman is undergoing fertility treatment, medications must be given to stimulate the ovaries.

This is called controlled ovarian stimulation

(COS). Ovarian

stimulation drugs

contain hormones that

act naturally in the

menstrual cycle and

their function is to

cause more than one

egg to mature.
