Long popular in Europe, gantry cranes have become a widely accepted alternative to overhead bridge cranes. This type of crane is similar to the bridge crane except that it runs on a runway at the floor level. The bridge is supported by a pair of rigid steel legs which are carried by a pair of end trucks along the floor level runway.

The overhead crane called the bridge crane, is the lifting equipment for hoisting materials over the workshop, warehouse and stockyard. The crane runs longitudinally along the rails on both sides of the elevated bridge, which can make full use of the space under the bridge to lift materials without obstacles by the ground equipment.
