This Discussion & Study Guide ("guide") is designed to help you and others learn about these concepts and scientific evidence associated with the Cambrian explosion in more detail. The guide is broken up into five segments and should be used in conjunction with viewing Darwin's

### DISCUSSION & STUDY GUIDE

Charles Darwin wrote On the Origin of Species to explain his theory of natural selection—which argues traits advantageous to the survival of a species are those that perpetuate over time. The theory was born out of years of reflection on geological and natural processes Darwin observed during his voyage on the HMS Beagle. The work was controversial for its time.

### On the Origin of Species Study Guide | Course Hero

Darwin proposed natural selection. Natural selection is the pressure for species with advantageous traits to survive while those with less advantageous traits died. Darwin said that natural selection explained evolution. The Origin of Species was also important because it was the first time that a strong body of evidence, taken from a wide range of species and environments, had been assembled in support of evolution.
