Write solution $x = a \cos(\omega t + \phi)$ in form:
 $x = a \cos \phi \cos \omega t - a \sin \phi \sin \omega t$ and
compare with equation (1.2) we find: $A = a \cos \phi$
and $B = -a \sin \phi$. We
can also find, with the
same analysis, that the
values of A and B for
solution $x = a \sin(\omega t - \phi)$
are given by: $A = -a \sin \phi$ and $B = a \cos \phi$
