Find lost or missing files in OneDrive - OneDrive

Searches the container for an element with a key equivalent to k and returns an iterator to it if found, otherwise it returns an iterator to map::end. Two keys are considered equivalent if the container's comparison object returns false reflexively (i.e., no matter the order in which the elements are passed as arguments). Another member function, map::count, can be used to just check whether a ...

The find method executes the callback function once for each index of the array until the callback returns a truthy value. If so, find immediately returns the value of that element. Otherwise, find returns undefined. callback is invoked for every index of the array, not just those with assigned values. This means it may be less efficient for ...
